FOR IMMEDIATE RELEASE

FREE*Styler* gets companion 'under-counter' LED Exposure System

LUTON, ENGLAND – 5th May 2016: Exile Technologies European sales office has announced the availability of EXPOSE DTS, a new 'under-counter' LED Exposure unit to compliment the FREEStyler Computer to Screen system that was launched at P&P Live! 2016.

EXPOSE DTS is an under-counter 'grill-pan' design UV exposure system for Screens up to 80cms x 110cms that has been built into a tabletop stand for the FREEStyler Computer to Screen system. The footprint for both Screen Imaging and Exposure is only 95 x 130cms so that the combination can fit into smaller screen rooms.

With the FREEStyler DTS and EXPOSE DTS combination the DIGITAL SCREEN ROOM has become a reality. EXILE have a special bundle price of £12,995.00 for both units if purchased together as a 'Digital Screen room bundle'

The FREEStyler frees Screen Printers from having to use costly Film Positives. Instead the image or stencil is digitally printed directly on a normal emulsion coated screen. After imaging the screen is ready for immediate exposure 'under-the-counter' using the EXPOSE DTS LED exposure system which has been designed specifically for Computer to Screen without a glass or vacuum.

The FREEStyler supports Screen frames up to 66 cms x 91 cms (36" x 26") so any screen size that can be imaged by the FREEStyler can also be exposed by the EXPOSE DTS system.

EXPOSE DTS uses special LED bulbs that have been optimized to deliver the correct wavelength for most types of Screen emulsion. These low cost, low power bulbs use much less electricity than conventional UV exposure systems and have a very long life span. If a bulb needs to be replaced the system is modular so the bulb can be swapped out in minutes.

There is also a stand-alone desktop version of EXPOSE DTS available for customers using other Computer to Screen systems such as EXILE's larger format SPYDER II Direct to Screen machines.
